

# Table of contents

<b>I</b>	<b>Introduction</b>	<b>5</b>
<b>1</b>	<b>Data approximation using splines</b>	<b>7</b>
<b>II</b>	<b>Data approximation using <math>D^m</math> splines: Theory and discretization</b>	<b>11</b>
<b>2</b>	<b>Introduction to <math>D^m</math> splines</b>	<b>13</b>
2.1	Interpolating $D^m$ splines . . . . .	13
2.1.1	The model problem . . . . .	13
2.1.2	Properties of interpolating spline functions . . . . .	16
2.1.3	Convergence of interpolating $D^m$ splines . . . . .	17
2.2	Smoothing $D^m$ splines . . . . .	23
2.2.1	The model problem . . . . .	23
2.2.2	Convergence results . . . . .	25
<b>3</b>	<b>Approximation using <math>D^m</math> splines</b>	<b>31</b>
3.1	The finite element framework . . . . .	31
3.2	Discrete $D^m$ splines . . . . .	34
3.2.1	Discrete interpolating $D^m$ splines . . . . .	34
3.2.2	Discrete smoothing $D^m$ splines . . . . .	35
3.2.3	Convergence of the approximation . . . . .	37
3.2.4	Discrete interpolating $D^m$ splines . . . . .	37
3.2.5	Discrete smoothing $D^m$ splines . . . . .	38

<b>III</b>	<b>APPLICATIONS</b>	<b>41</b>
<b>4</b>	<b>Approximation of rapidly varying data</b>	<b>43</b>
4.1	Introduction . . . . .	43
4.2	Assumptions and notations . . . . .	45
4.3	Main result . . . . .	47
<b>5</b>	<b>Application to real datasets</b>	<b>51</b>
5.1	A scale transformations construction . . . . .	53
5.2	Applications to surface fitting from rapidly varying data . .	56
5.3	Numerical examples . . . . .	57
<b>6</b>	<b><math>C^k</math> surface approximation from surface patches</b>	<b>61</b>
6.1	Introduction . . . . .	61
6.2	Approximation of $\ \cdot\ _{0,\omega}$ . . . . .	64
6.3	Discrete Smoothing $D^m$ spline. . . . .	66
6.4	Numerical results . . . . .	71
6.4.1	Hawaii, USA . . . . .	71
6.4.2	Pyrénées, France . . . . .	74
<b>7</b>	<b>Approximation from bathymetry dataset</b>	<b>81</b>
7.1	Modelling . . . . .	81
7.2	Existence-uniqueness, convergence . . . . .	83
7.3	Applications in the Marianas Trench . . . . .	85
7.3.1	Getting the data . . . . .	85
7.3.2	Application in the Marianas trench . . . . .	89
7.4	Conclusions . . . . .	93
<b>8</b>	<b>Approximation of surfaces with fault(s)</b>	<b>95</b>
8.1	Introduction . . . . .	96
8.2	Notations . . . . .	99
8.3	Segmentation process . . . . .	100
8.4	Mesh generation . . . . .	103
8.5	Approximation method . . . . .	105
8.5.1	Discrete smoothing $D^m$ splines on $\Omega'$ . . . . .	105
8.5.2	Rapidly varying data algorithm . . . . .	107
8.5.3	Convergence of the approximation . . . . .	108

8.6	Numerical examples . . . . .	109
8.6.1	Explicit function with fault . . . . .	110
8.6.2	Geological surface with rapidly varying data . . . . .	114
8.6.3	Geological surface with fault . . . . .	119
<b>9</b>	<b>Spline approximation of gradient fields: applications to wind velocity fields</b>	<b>125</b>
9.1	Introduction . . . . .	125
9.2	Modelling . . . . .	127
9.2.1	The fitting model . . . . .	127
9.2.2	Existence and uniqueness results . . . . .	130
9.2.3	Convergence result . . . . .	131
9.3	Discretization . . . . .	135
9.3.1	Introduction of the notations . . . . .	135
9.3.2	Estimation of the approximation error . . . . .	138
9.4	Experimental results. . . . .	139
9.4.1	Experimental tests on synthetic datasets . . . . .	141
9.4.2	Datasets of wind velocity fields . . . . .	146
<b>IV</b>	<b>Bibliography</b>	<b>153</b>
