

# Table of Contents

<b>Introduction</b>	<b>1</b>
<b>Chapter 1. The prehistory of exoplanets</b>	<b>5</b>
First ideas and speculations . . . . .	5
The evolution of concepts on the formation of the Solar System . . . . .	8
The discovery of protoplanetary disks . . . . .	11
The first attempts to detect exoplanets . . . . .	12
Bibliography . . . . .	17
<b>Chapter 2. The first detections</b>	<b>19</b>
An unexpected discovery: planets around a pulsar! . . . . .	19
1995: The first planet around a star like ours! . . . . .	21
The success of velocimetry . . . . .	27
Bibliography . . . . .	31
<b>Chapter 3. The method of transits</b>	<b>33</b>
What is a planetary transit? . . . . .	33
Observations from the Earth . . . . .	36
The Space Age . . . . .	37
The CoRoT mission . . . . .	37
The Kepler Mission . . . . .	38
Primary and Secondary Transits . . . . .	40
Transmission spectroscopy (primary transit) . . . . .	41
Emission spectroscopy (secondary transit) . . . . .	43
Gravitational transits . . . . .	44
Bibliography . . . . .	46
<b>Chapter 4. Detecting and viewing exoplanets</b>	<b>47</b>
Advantages and limitations of indirect methods of detection . . . . .	47
The transit method . . . . .	47
Exoplanets detected as gravitational microlenses . . . . .	48
Exoplanets detected by velocimetry or astrometry . . . . .	49
Direct observation: a very difficult problem . . . . .	50
Coronography . . . . .	51
The black-fringe interferometer . . . . .	52
How to obtain perfect images: adaptive optics . . . . .	53
Combined coronography and adaptive optics . . . . .	55
A new track for the future: the search for exoplanets in the radio domain . . . . .	57
Bibliography . . . . .	57

<b>Chapter 5. The variety of exoplanets</b>	<b>59</b>
The outstanding results of the last twenty years. . . . .	59
A multitude of exoplanets . . . . .	59
Giant exoplanets very close to their stars . . . . .	59
Orbits of all kinds. . . . .	60
Many multiple systems . . . . .	61
Planets around double stars. . . . .	62
The different classes of exoplanets . . . . .	62
Hot and Cold Jupiters. . . . .	64
Super-Earths and Neptunes . . . . .	67
Earths and Habitable Planets . . . . .	70
Bibliography . . . . .	73
<b>Chapter 6. The birth of stars and protoplanetary disks</b>	<b>75</b>
Protostars, jets and disks. . . . .	75
The protoplanetary disks. . . . .	78
The ice lines in protoplanetary disks. . . . .	82
Planet-disk interactions. . . . .	84
Bibliography . . . . .	87
<b>Chapter 7. Formation and evolution of planetary systems</b>	<b>89</b>
The formation of planets . . . . .	89
The evolution of planetary systems: what does the Solar System teach us? . . . . .	92
Why no super-Earths in the Solar System? . . . . .	98
Expelled planets, isolated exoplanets . . . . .	98
What future for the Solar System? . . . . .	100
What consequences for our understanding of exoplanetary systems? . . . . .	102
Bibliography . . . . .	104
<b>Chapter 8. The physical nature of exoplanets</b>	<b>107</b>
The observables . . . . .	107
The first measurements of the atmospheric composition of hot Jupiters . . . . .	111
Possible causes of departure from thermochemical equilibrium. . . . .	114
Clouds and mists on exoplanets . . . . .	116
Spectroscopic measurements of super-Earths and exo-Neptunes in transit	116
Spectroscopy of exoplanets from the ground . . . . .	118
Phase curves and atmospheric circulation of exoplanets . . . . .	120
Bibliography . . . . .	121
<b>Chapter 9. Around Exoplanets</b>	<b>123</b>
The exocomets . . . . .	124
Giant rings around an exoplanet? . . . . .	127
A satellite? . . . . .	129
Bibliography . . . . .	130
<b>Chapter 10. Life on exoplanets?</b>	<b>131</b>
What is life? . . . . .	132
The emergence of life on Earth. . . . .	133
Life elsewhere in the Solar System? . . . . .	141
How to detect life on exoplanets? . . . . .	144
Bibliography . . . . .	149

<b>Chapter 11. Exploring Exoplanets: What Prospects?</b>	<b>151</b>
Habitable planets, inhabited planets: a difficult problem . . . . .	151
More planets, and smaller ones, to explore the diversity of planetary systems . . . . .	154
New light on giant planets: astrometry and imagery . . . . .	159
Studying the atmospheres of exoplanets . . . . .	162
Towards analogs of the Earth-Sun system: after 2030? . . . . .	165
Alpha Centauri: other planets? . . . . .	167
<b>Chapter 12. Communicating with other worlds?</b>	<b>169</b>
The probability of existence of advanced civilizations on other planets . . . . .	169
The SETI Projects . . . . .	171
Messages to the Universe . . . . .	174
Bibliography . . . . .	177
<b>Appendix 1: The planets of the Solar System</b>	<b>179</b>
<b>Appendix 2: A Selection of Exoplanets</b>	<b>181</b>
<b>Appendix 3: Some useful data</b>	<b>189</b>
<b>Appendix 4: The nomenclature of stars and exoplanets</b>	<b>191</b>
<b>Glossary</b>	<b>193</b>
<b>Acronyms</b>	<b>199</b>
<b>Index</b>	<b>203</b>
