Foreword

Preface

Section 1 Magnetic Fields and Their Biological Effects

Chapter 1 Medical Theranostics Based on Iron Oxide Nanoparticles under Magnetic Fields	3
1.1 Introduction	3
1.2 Properties of IONPs under magnetic fields	4
1.3 Pharmacokinetic and biocompatibility	5
1.4 Contrast agents of MRI	7
1.5 Hyperthermal agents	8
1.6 Drug delivery systems	12
1.7 Multimodality theranostics systems of magnetic microbubbles, microcapsules and liposomes	13
1.8 Other therapeutic potentials	17
1.9 Summary and future prospective	20
References	21
Chapter 2 Progress of Static Magnetic Fields and Cancer Research in China	31
2.1 Initial clinical studies showed that SMFs could inhibit cancer growth in some patients	34
2.2 Cellular studies show that SMF inhibits multiple cancer cell growth but has minimum effects on non-cancer cells	36
2.3 Mechanisms of cancer inhibition by SMFs studied at molecular, cellular and animal levels	37
2.4 SMF in combination with chemodrugs	48
2.5 Parameters that directly affect the outcomes of SMF exposure	50
References	54

Chapter 3 Study of SMF's Effects on Cells, Microorganisms, Animals and Plants in NPU	61
3.1 The effects of SMFs on cells	62
3.2 The effects of SMFs on microorganism	72
3.3 The effects of SMF on small animals	74
3.4 The effects of SMFs on plants	78
References	80
Chapter 4 <i>In Vitro</i> Cellular Response to ELF-MF and RF-EMF	83
4.1 Gap junctional intercellular communication	85
4.2 Epidermal growth factor receptor (EGFR) clustering	88
4.3 Stress kinases signaling in response to ELF-MF	91
4.4 Effect of ELF-MF and RF-EMF on gene expression	92
4.5 Effect of ELF-MF and RF-EMF on protein expression	95
4.6 DNA damage response to EMF exposure	97
References	100
Chapter 5 Utilization of Magnetic Field for Protein Crystallization	108
5.1 Introduction	109
5.2 Effects of magnetic field on protein crystallization	117
5.3 Quality of protein crystals obtained in the magnetic field	125
5.4 Toward applications in practical protein crystallization	133
5.5 Concluding remarks and future perspectives	135
References	136
Chapter 6 High Static Magnetic Fields (SMFs) on Reproduction and Development of an Intact Living Organism: <i>Caenorhabditiselegans</i>	144
6.1 <i>Caenorhabditis elegans</i> (<i>C. elegans</i>) and its response to magnetic field	146
6.2 Source of high SMF and exposure procedures	148
6.3 SMFs on the lifespan and development process of <i>C. elegans</i>	149
6.4 SMF on brood size and germline apoptosis in <i>C. elegans</i>	151
6.5 SMF on mitochondrial damage and oxidative stress in <i>C. elegans</i>	156
References	159

Chapter 7 Low Frequency Magnetic Field Regulates Immunity and Inhibits Cancer	164
7.1 Low frequency magnetic field (LF-MF) exposure system	164
7.2 Screening for suitable tumor parameters of LF-MF	166
7.3 Tumor inhibition effect of LF-MF	167
7.4 LF-MF modulated the function of immune system	181
7.5 LF-MF inhibited adipogenesis of human mesenchymal stem cells	192
7.6 Research progress of MF in China	197
7.7 Summary	202
References	202
Chapter 8 Moderate Intensity Rotating Low Frequency Magnetic Fields and Their Effects on Human Bodies	210
8.1 MIR-LF-MF with different parameters	211
8.2 MIR-LF-MF effects on healthy volunteers	214
8.3 MIR-LF-MF and high-altitude polycythemia (HAPC)	215
8.4 MIR-LF-MF effects on patients with chronic diseases	216
8.5 MIR-LF-MF effects on cancer patients	217
8.6 General effects of MIR-LF-MR on human bodies and working hypothesis	220
8.7 Conclusions and perspectives	222
References	222
Chapter 9 Advances in Static Magnetic Field Safety Studies	224
9.1 Laboratory studies with cells	225
9.2 Laboratory studies with animals	227
9.3 SMF studies with humans	229
9.4 Epidemiological studies	231
References	232

Section 2 Nuclear Magnetic Resonance (NMR) and Magnetic Resonance Imaging (MRI)

Chapter 10 Structural Basis of Biomolecular Interactions Studied by NMR Spectroscopy	243
10.1 Experimental considerations of NMR-based structural studies	244

10.2	Proteins related to regulation of gene expression	245
10.3	Proteins in cell junction	255
10.4	NMR methodology development for macromolecular structure and dynamics	257
10.5	NMR application in fragment-based lead discovery	259
10.6	Summary and outlook	261
	References	261
Chapter 11	Protein NMR Spectroscopy in Cell-like Environment	268
11.1	The effect of macromolecular crowding on protein structure and function	269
11.2	The effect of confinement on protein structure and function	274
11.3	Protein enrichment in living cells	278
11.4	Isotopic labeling for protein NMR in cells	279
11.5	Protein structure and conformation in living cells	280
11.6	Protein dynamics and interactions in living cells	287
11.7	Perspective	296
	References	296
Chapter 12	High-resolution Nuclear Magnetic Resonance Techniques under Inhomogeneous Magnetic Fields	303
12.1	Introduction	304
12.2	IMQC-based high-resolution NMR	305
12.3	SQC-based high-resolution NMR	332
	References	346
Chapter 13	^{19}F Nuclear Magnetic Resonance/Magnetic Resonance Imaging in China	355
13.1	Introduction	356
13.2	Single-modality probes	356
13.3	Dual-modality probes	363
13.4	Multi-modality probes	366
13.5	Others	369
13.6	Conclusions and future prospects	371
	References	371

Chapter 14	Ultrasensitive Xenon MRI and Molecular Imaging	375
14.1	Ultrasensitive pulmonary gas magnetic resonance imaging	376
14.2	Ultrasensitive HP ^{129}Xe NMR probes	381
14.3	Microenvironment responsive probes	391
14.4	Ultralow field magnetic resonance spectroscopy	397
	References	399
Chapter 15	NMR Applications in Measuring Protein Noncovalent Interactions	402
15.1	h-bond interaction	403
15.2	C-H/ π interaction	407
15.3	Electrostatic interaction	408
15.4	Electric field	411
	References	415
Chapter 16	Application of Nanodiscs in Examining Protein-Membrane Interaction	418
16.1	Introduction to nanodiscs	418
16.2	Self-assembly of nanodiscs	421
16.3	Properties of nanodiscs	423
16.4	Application of nanodiscs for studies of membrane proteins	424
	References	435
Index	442
