Preface	vii
1 Introduction	1
2 Group action. Basic definitions and examples	5
2.1 The action of a group on itself	12
2.2 Group action on vector space	16
3 Delone sets and periodic lattices	25
3.1 Delone sets	25
3.2 Lattices	31
3.3 Sublattices of L	35
3.4 Dual lattices.	38
4 Lattice symmetry	43
4.1 Introduction	43
4.2 Point symmetry of lattices	43
4.3 Bravais classes	46
4.4 Correspondence between Bravais classes and lattice point symmetry groups	50
4.5 Symmetry, stratification, and fundamental domains	52
4.5.1 Spherical orbifolds for 3D-point symmetry groups . .	57
4.5.2 Stratification, fundamental domains and orbifolds for three-dimensional Bravais groups	62
4.5.3 Fundamental domains for $P4/mmm$ and $I4/mmm$.	63
4.6 Point symmetry of higher dimensional lattices.	69
4.6.1 Detour on Euler function	70
4.6.2 Roots of unity, cyclotomic polynomials, and companion matrices	71
4.6.3 Crystallographic restrictions on cyclic subgroups of lattice symmetry	72
4.6.4 Geometric elements	73

5	Lattices and their Voronoï and Delone cells	81
5.1	Tilings by polytopes: some basic concepts	81
5.1.1	Two- and three-dimensional parallelotopes	83
5.2	Voronoï cells and Delone polytopes	84
5.2.1	Primitive Delone sets	88
5.3	Duality	89
5.4	Voronoï and Delone cells of point lattices	90
5.4.1	Voronoï cells	90
5.4.2	Delone polytopes	91
5.4.3	Primitive lattices	91
5.5	Classification of corona vectors	93
5.5.1	Corona vectors for lattices	94
5.5.2	The subsets \mathcal{S} and \mathcal{F} of the set \mathcal{C} of corona vectors	95
5.5.3	A lattice without a basis of minimal vectors	99
6	Lattices and positive quadratic forms	101
6.1	Introduction	101
6.2	Two dimensional quadratic forms and lattices	102
6.2.1	The $GL_2(\mathbb{Z})$ orbits on $\overline{\mathcal{C}_+}(\mathcal{Q}_2)$	102
6.2.2	Graphical representation of $GL_2(\mathbb{Z})$ transformation on the cone of positive quadratic forms	104
6.2.3	Correspondence between quadratic forms and Voronoï cells	109
6.2.4	Reduction of two variable quadratic forms	110
6.3	Three dimensional quadratic forms and 3D-lattices	112
6.3.1	Michel's model of the 3D-case	113
6.3.2	Construction of the model	116
6.4	Parallelohedra and cells for N-dimensional lattices.	122
6.4.1	Four dimensional lattices	128
6.5	Partition of the cone of positive-definite quadratic forms	130
6.6	Zonotopes and zonohedral families of parallelohedra	134
6.7	Graphical visualization of members of the zonohedral family	136
6.7.1	From Whitney numbers for graphs to face numbers for zonotopes	147
6.8	Graphical visualization of non-zonohedral lattices.	148
6.9	On Voronoï conjecture	152
7	Root systems and root lattices	153
7.1	Root systems of lattices and root lattices	153
7.1.1	Finite groups generated by reflections	156
7.1.2	Point symmetry groups of lattices invariant by a reflection group	159
7.1.3	Orbit scalar products of a lattice; weights of a root lattice	162

7.2	Lattices of the root systems	164
7.2.1	The lattice I_n	164
7.2.2	The lattices D_n , $n \geq 4$ and F_4	164
7.2.3	The lattices D_n^* , $n \geq 4$	166
7.2.4	The lattices D_n^+ for even $n \geq 6$	167
7.2.5	The lattices A_n	167
7.2.6	The lattices A_n^*	169
7.3	Low dimensional root lattices	169
8	Comparison of lattice classifications	171
8.1	Geometric and arithmetic classes	174
8.2	Crystallographic classes	176
8.3	Enantiomorphism	179
8.4	Time reversal invariance	181
8.5	Combining combinatorial and symmetry classification	183
9	Applications	189
9.1	Sphere packing, covering, and tiling	189
9.2	Regular phases of matter	192
9.3	Quasicrystals	194
9.4	Lattice defects	194
9.5	Lattices in phase space. Dynamical models. Defects.	196
9.6	Modular group	202
9.7	Lattices and Morse theory	206
9.7.1	Morse theory	207
9.7.2	Symmetry restrictions on the number of extrema	208
A	Basic notions of group theory with illustrative examples	211
B	Graphs, posets, and topological invariants	223
C	Notations for point and crystallographic groups	229
C.1	Two-dimensional point groups	230
C.2	Crystallographic plane and space groups	231
C.3	Notation for four-dimensional parallelohedra	231
D	Orbit spaces for plane crystallographic groups	235
E	Orbit spaces for 3D-irreducible Bravais groups	243
	Bibliography	251
	Index	259
