

Contents

Chapter 1	A brief history	1
1.1	Moiré effect	1
1.2	Moiré deflectometry	1
1.3	Moiré deflection tomography	2
1.4	The scope of the book	4
Chapter 2	Theoretical basis of flow field's moiré deflection tomography diagnosis	6
2.1	Dependence between refractive index and key parameters of flow fields	6
2.2	A new refractive index descriptive model of common plasma	8
2.2.1	Derivation based on Saha equation	8
2.2.2	Feasibility verification and analysis	11
2.3	A uniform refractive index description	15
2.3.1	Concept of equivalent particle number density	15
2.3.2	Rationality of the model	17
2.4	Physical essence of refractive index gradient in flow fields	22
2.4.1	Refractive index distributions	22
2.4.2	Physical essence analysis	23
2.5	A two-temperature refractive index model	26
2.5.1	Theory and rationality analysis	26
2.5.2	Method of measuring two temperatures	28
Chapter 3	Experiment of flow field's moiré deflection tomography diagnosis	30
3.1	Effect of non-collimated optical path	31
3.1.1	Realization of experiment	31
3.1.2	Influence on temperature reconstruction	36
3.2	Effect of phase object's position	38
3.2.1	Theoretical deduction by scalar diffraction theory	38
3.2.2	Intensity distribution and fringe equation	44
3.2.3	Verification by moiré fringe slope	49

3.3	Integrating moiré deflection tomography and shadowing method	51
3.3.1	Principle description and experimental design	51
3.3.2	Feasibility analysis	53
Chapter 4	Information extraction of moiré fringes	55
4.1	Preprocessing based on multiresolution analysis (MRA)	56
4.1.1	Basic theory	56
4.1.2	Results and comparison of three-level MRA	57
4.2	Phase extraction based on Gabor wavelet	63
4.2.1	Deduction of wrapped phase	64
4.2.2	Comparative analysis based on true phase results	66
4.3	Phase extraction based on Morlet wavelet	70
4.3.1	Fringe preprocessing and wrapped phase deduction	70
4.3.2	Phase information	73
4.3.3	Contribution of wavelet ridges	77
4.4	Phase denoising and unwrapping based on MRA	79
4.4.1	Theory and method	81
4.4.2	Effect of noise and discontinuity	84
4.4.3	Effect of wavelet basis function	87
4.4.4	Effect of decomposition level	88
4.4.5	Effect of iteration number	89
4.5	Application of deep learning	91
4.5.1	Impact of flow field's position on moiré fringe analysis	92
4.5.2	Moiré fringe analysis across diverse carrier frequencies	104
Chapter 5	Measurement of key parameters for flow fields by moiré deflection tomography	117
5.1	Temperature measurement	117
5.1.1	Effect of composition	117
5.1.2	Effect of pressure	142
5.2	Electron number density measurement	148
5.2.1	Indirect measurement by one-wavelength moiré deflection tomography	148
5.2.2	Direct measurement by two-wavelength moiré deflection tomography	154
5.3	Composition ratio measurement	160
5.3.1	Two objects mixed	161
5.3.2	Three objects mixed	161

Chapter 6	Application of moiré deflectometry in atmosphere measurement	163
6.1	Measurement of atmospheric particle number density fluctuations	164
6.1.1	Principle analysis	164
6.1.2	Theoretical deduction	165
6.1.3	Experiment and arrival angles	167
6.1.4	Distribution of atmospheric particle number density fluctuations	173
6.2	Measurement of atmospheric refractive-index structure parameter	174
6.2.1	Situation analysis	174
6.2.2	Method description	176
6.2.3	Temporal and spatial distributions of deflection angle	178
6.2.4	Distribution of atmospheric refractive-index structure parameter	182
