Preface

Chapter 1	Probability and Distributions	1
1.1	Probability	1
1.1.1	Permutation, combination and binomial coefficients	1
1.1.2	Sample space	3
1.1.3	Events	4
1.1.4	Properties of probability	5
1.2	Conditional Probability	7
1.3	Bayes Theorem	9
1.4	Probability Distributions	10
1.5	Bivariate Distributions	13
1.5.1	Joint distribution	13
1.5.2	Marginal and conditional distributions	14
1.5.3	Independency of two random variables	14
1.6	Expectation, Variance and Moments	16
1.6.1	Moments	16
1.6.2	Some probability inequalities	18
1.6.3	Conditional expectation	21
1.6.4	Compound random variables	23
1.6.5	Calculation of (conditional) probability via (conditional) expectation	23
1.7	Moment Generating Function	24
1.8	Beta and Gamma Distributions	27
1.8.1	Beta distribution	27
1.8.2	Gamma distribution	29
1.9	Bivariate Normal Distribution	32
1.9.1	Univariate normal distribution	32
1.9.2	Correlation coefficient	34
1.9.3	Joint density	34
1.9.4	Stochastic representation of random variables or random vectors	38

1.10	Inverse Bayes Formulae	40
1.10.1	Three inverse Bayes formulae	40
1.10.2	Understanding the IBF	43
1.10.3	Two examples	45
1.11	Categorical Distribution	47
1.12	Zero-inflated Poisson Distribution	49
	Exercise 1	53
Chapter 2	Sampling Distributions	57
2.1	Distribution of the Function of Random Variables	57
2.1.1	Cumulative distribution function technique	57
2.1.2	Transformation technique	62
2.1.3	Moment generating function technique	71
2.2	Statistics, Sample Mean and Sample Variance	73
2.2.1	Distribution of the sample mean	73
2.2.2	Distribution of the sample variance	74
2.3	The t and F Distributions	76
2.3.1	The t distribution	76
2.3.2	The F distribution	78
2.4	Order Statistics	81
2.4.1	Distribution of a single order statistic	81
2.4.2	Joint distribution of more order statistics	84
2.5	Limit Theorems	86
2.5.1	Convergency of a sequence of distribution functions	86
2.5.2	Convergence in probability	91
2.5.3	Relationship of four classes of convergency	92
2.5.4	Law of large number	94
2.5.5	Central limit theorem	94
2.6	Some Challenging Questions	96
	Exercise 2	99
Chapter 3	Point Estimation	102
3.1	Maximum Likelihood Estimator	102
3.1.1	Point estimator and point estimate	102
3.1.2	Joint density and likelihood function	104
3.1.3	Maximum likelihood estimate and maximum likelihood estimator	105
3.1.4	The invariance property of MLE	115

3.2	Moment Estimator	117
3.3	Bayesian Estimator	121
3.4	Properties of Estimators	125
3.4.1	Unbiasedness	125
3.4.2	Efficiency	126
3.4.3	Sufficiency	138
3.4.4	Completeness	146
3.5	Limiting Properties of MLE	151
3.6	Some Challenging Questions	153
	Exercise 3	156
Chapter 4	Confidence Interval Estimation	162
4.1	Introduction	162
4.2	The Confidence Interval of Normal Mean	166
4.2.1	The variance is known	166
4.2.2	The variance is unknown	167
4.3	The Confidence Interval of the Difference of Two Normal Means	169
4.4	The Confidence Interval of Normal Variance	171
4.4.1	The mean is known	171
4.4.2	The mean is unknown	172
4.5	The Confidence Interval of the Ratio of Two Normal Variances	172
4.6	Large-Sample Confidence Intervals	174
4.7	The Shortest Confidence Interval	178
	Exercise 4	180
Chapter 5	Hypothesis Testing	183
5.1	Introduction	183
5.1.1	Several basic notions	184
5.1.2	Type I error and Type II error	186
5.1.3	Power function	189
5.2	The Neyman–Pearson Lemma	191
5.2.1	Simple null hypothesis versus simple alternative	192
5.2.2	Composite hypotheses	199
5.3	Likelihood Ratio Test	203
5.3.1	Likelihood ratio statistic	203
5.3.2	Likelihood ratio test	205

5.4	Tests on Normal Means	211
5.4.1	One-sample normal test when variance is known	211
5.4.2	One-sample t test	215
5.4.3	Two-sample t test	217
5.5	Goodness of Fit Test	220
5.5.1	Introduction	220
5.5.2	The chi-square test for totally known distribution	222
5.5.3	The chi-square test for known distribution family with unknown parameters	226
	Exercise 5	230
 Chapter 6 Critical Regions and p-values for Skew Null Distributions		
6.1	One-sample Chi-square Test on Normal Variance	233
6.2	Two-sample F Test on Normal Variances	238
 Appendix A Basic Statistical Distributions		
A.1	Discrete Distributions	246
A.2	Continuous Distributions	250
 Appendix B A Unified Expectation Technique		
B.1	Continuous Random Variables	257
B.2	Discrete Random Variables	277
 Appendix C The Newton–Raphson and Fisher Scoring Algorithms		
C.1	Newton’s Method for Root Finding	289
C.2	Newton’s Method for Calculating MLE	294
C.3	The Newton–Raphson Algorithm for High-dimensional Cases	299
C.4	The Fisher Scoring Algorithm	304
 List of Figures
