Preface

Part I The Wave Function and Schrödinger Equation

Chapter 1 The wave function and Schrödinger equation	1
1.1 The wave-particle duality and matter wave	1
1.2 Wave function and its statistical interpretation	5
1.3 The principle of superposition	8
1.4 The Schrödinger equation	9
Biography	11
Essay:Schrödinger cat and EPR paradox	14
Associated application:TEM and SEM	16
Animation and simulation	18
Discussion questions	21
Exercises	22
Chapter 2 Time -independent Schrödinger equation and its application in one dimension	23
2.1 Time-independent Schrödinger equation and the stationary state	23
2.2 The bound state and discrete spectra	27
2.3 Reflection and transmission, tunneling effect	44
Biography	54
Associated application:STM	55
Animation and simulation	56
Discussion questions	60
Exercises	60

Part II Physical Observables and Representations

Chapter 3 Physical observables and representations	64
3.1 Observables and operators	64
3.2 Eigenvalues and eigenvectors of Hermitian operators	71

3.3	Representations and their transformations	80
3.4	The uncertainty principle.....	89
3.5	Dirac notation and the occupation number representation	94
	Biography	102
	Essay:Heisenberg and matrix mechanics	102
	Animation and simulation.....	103
	Discussion questions	108
	Exercises	108

Part III Applications of the Schrödinger Equation in 3D

Chapter 4	A particle in a central field	110
4.1	A particle in a central field	110
4.2	The radial equation for an electron in the Coulomb potential	118
4.3	The hydrogen atom	124
	Biography	129
	Essay:Niels Bohr and his theory for the hydrogen atom	130
	Associated application:Quantum computer	131
	Discussion questions	133
	Exercises	134

Part IV Approximation Methods

Chapter 5	Perturbation theory	135
5.1	Time-independent perturbation theory	136
5.2	Time-dependent perturbation theory	148
5.3	The adiabatic theorem	171
	Biography	174
	Essay:Berry phase	175
	Associated application:Laser	177
	Animation and simulation.....	178
	Discussion questions	180
	Exercises	182

Part V Spin and Identical Particle System

Chapter 6 Spin and identical particle system	185
6.1 The Stern-Gerlach experiment and its interpretation	185
6.2 The description of spin	189
6.3 The Schrödinger equation of charged particles in an external electromagnetic field	194
6.4 Total angular momentum	199
6.5 Fine structure of alkali atoms	205
6.6 The Zeeman effect	208
6.7 Characteristics of identical particles	212
6.8 The wave function for a system of identical particles	214
6.9 Wave functions for two-electron system	218
6.10 The helium atom	224
Biography	228
Essay: Quantum entanglement and Bell theorem	232
Associated application: Bose-Einstein condensation	234
Animation and simulation	237
Discussion questions	239
Exercises	240
References	242
Appendices	244
Index	263
