Preface

Chapter 1	Millenniums of Permanent Magnets: From Compasses to Rare-earth Magnets	1
	References	5
Chapter 2	Coercivity Mechanisms in Nanostructured Permanent Magnets	7
2.1	Introduction	8
2.2	Hysteresis loops and a survey of various coercivity mechanisms	10
2.2.1	Hysteresis loops	10
2.2.2	Coherent rotation and domain wall motion	12
2.2.3	Various modes of nucleation and nucleation expansion	14
2.2.4	Numerical approaches and more advanced models	16
2.3	Interface-pinning of well-oriented permanent magnetic systems	18
2.3.1	Basic formulation	18
2.3.2	Comparison of nucleation and self-pinning fields	19
2.3.3	Experimental evidence and comparison with other theories	25
2.4	Discussions and conclusions	26
2.4.1	Single-phase versus two-phases	26
2.4.2	Pinning versus nucleation	27
2.4.3	Size effect and grain boundary enhancement	29
2.4.4	Conclusions	30
	References	31
Chapter 3	Sm-Co High-Temperature Permanent Magnet Materials	36
3.1	Introduction	36
3.2	Historical review of development of Sm-Co permanent magnets	38
3.3	Phase diagram and crystal structures	40

3.4	Intrinsic magnetic properties of R-Co compounds	42
3.5	Sm-Co permanent magnets capable of operating up to 300 °C	46
3.6	High-temperature $\text{Sm}_2(\text{Co, Fe, Cu, Zr})_{17}$ -type magnets capable of operating up to 550 °C	51
3.6.1	Effects of compositions on high-temperature intrinsic coercivity of Sm-TM permanent magnets	52
3.6.2	New high-temperature $\text{Sm}_2(\text{Co, Fe, Cu, Zr})_{17}$ -type magnets	53
3.6.3	Long-term thermal stability of new high-temperature permanent magnets	56
3.6.4	Abnormal temperature dependence of intrinsic coercivity	57
3.7	Thermal stability, temperature coefficient, and modeling of temperature-compensated magnets	57
3.7.1	Reversible and irreversible flux density loss	57
3.7.2	Temperature coefficient	59
3.7.3	Modeling of temperature-compensated magnets	62
3.8	Nanograin structure, nanocrystalline, and nanocomposite Sm-Co magnetic materials	65
3.9	Other Sm-Co permanent magnet materials	72
3.10	Prospects of future rare earth permanent magnet materials	73
3.11	Conclusions	76
	References	77
Chapter 4	Ternary Fe-rich R-Fe-M Intermetallics with the ThMn_{12}- type Structure and Their Interstitial Compounds	82
4.1	Introduction	82
4.2	Part one: Ternary Fe rich 1-12 compounds	85
4.2.1	Structural and magnetic properties of $\text{Y}(\text{Mn}_{1-x}\text{Fe}_x)_{12}$ which is the first synthesis of Fe-rich 1-12 compounds	85
4.2.2	Structural and magnetic properties of $\text{RFe}_{12-x}\text{M}_x$	90
4.2.3	Structural and magnetic properties of RTiFe_{11} in comparison with RTiCo_{11} and $\text{YTi}(\text{Fe}_{1-x}\text{Ni}_x)_{11}$	90
4.3	Part two: Interstitial nitrogen atom effect on the 1-12 compounds and its applications	108

4.3.1	Interstitial nitrogen atom effect on the 1-12 compounds	108
4.3.2	Interstitial hydrogen (or carbon) atom effect on the 1-12 compounds	116
4.3.3	Development of novel permanent magnets based on $R(Fe,M)_{12}N_x$	121
4.4	Concluding remarks	129
	References	130
Chapter 5	Mn-based Permanent Magnets	134
5.1	Introduction	135
5.2	Mn-Al hard magnetic phase	136
5.3	MnBi hard magnetic materials	147
5.4	Mn_xGa magnetic materials	157
5.5	Summary	164
	References	164
Chapter 6	Anisotropic Nanocomposite Soft/Hard Multilayer Magnets	169
6.1	Introduction	170
6.2	The anisotropic $Nd_2Fe_{14}B$ based nanocomposite multilayer magnets	171
6.3	Anisotropic $SmCo_5$ based nanocomposite permanent multilayer magnets	204
6.4	Anisotropic rare-earth free based nanocomposite permanent multilayer magnets	211
	References	218
Chapter 7	Nanocrystalline and Nanocomposite Permanent Magnets by Melt Spinning Technique	223
7.1	Melt-spinning technique	224
7.2	Uniqueness in melt-spun materials	227
7.2.1	Cooling control	229
7.2.2	Amorphization and crystallization	232
7.2.3	Phase formation	234
7.2.4	Consolidation	236
7.3	Melt-spun materials	241

7.3.1	Single-phase nanocrystalline magnets	241
7.3.2	Nanocomposite magnets	266
7.3.3	Precipitation-hardening ribbons	288
7.4	Magnetic phenomena in melt-spun magnets	300
7.4.1	Single-phase magnetic behavior	301
7.4.2	Remanence enhancement	303
7.4.3	Henkel plot	306
7.4.4	Recoil loop	311
7.4.5	First-order reversal curve	317
7.4.6	Coercivity and microstructure parameters	320
7.4.7	Reversible and irreversible magnetization	323
7.5	Summary and outlook	325
	References	326
Chapter 8 Grain Boundary Restructuring and La/Ce/Y		
	Application in Nd-Fe-B Magnets	339
8.1	Introduction	340
8.2	Grain boundary restructuring of Nd-Fe-B sintered magnets	341
8.2.1	Fundamentals of grain boundary restructuring	341
8.2.2	(Pr, Nd) _{32.5} Fe _{62.0} Cu _{5.5} restructuring: High corrosion-resistant Nd-Fe-B	342
8.2.3	Dy _{71.5} Fe _{28.5} restructuring: High-coercivity Nd-Fe-B	350
8.3	Application of high-abundant La/Y/Ce in Nd-Fe-B magnets	355
8.3.1	La-Ce co-substitution	356
8.3.2	Y-Ce co-substitution for Nd	381
8.3.3	Effects of REFe ₂ on microstructure and magnetic properties of (Nd, Ce)-Fe-B sintered magnets	387
8.4	Summary and perspectives	398
	References	399
Chapter 9 Rare Earth Permanent Magnets Prepared by		
	Hot Deformation Process	404
9.1	Introduction	405
9.2	Effects of preparation parameters on HD magnets	407

9.2.1	HP temperature	408
9.2.2	HD temperature	409
9.2.3	Deformation degree	410
9.2.4	Strain rate	412
9.2.5	Inhomogeneity of microstructure in HD magnet	413
9.2.6	Influence of chemical composition	414
9.3	Coercivity enhancement for HD Nd-Fe-B magnets	417
9.3.1	Coercivity mechanism of HD Nd-Fe-B magnets	417
9.3.2	Coercivity enhancement of hot-deformed Nd-Fe-B magnets	418
9.3.3	Discussion on the coercivity enhancement of HD Nd-Fe-B magnets ..	423
9.4	HD nanocomposite Nd-Fe-B magnets	425
9.4.1	Nanocomposite magnets prepared by Nd-lean powders	426
9.4.2	Nanocomposite magnets prepared by the co-doping technique	429
9.4.3	The deformability enhancement of nanocomposite magnets by introducing rare-earth-rich liquid phase	430
9.5	Radially oriented Nd-Fe-B ring magnet prepared by backward extrusion method	432
9.5.1	Texture evolution in backward extrusion of NdFeB ring magnet	434
9.5.2	Magnetic performance improvement of backward-extruded NdFeB RM	436
9.5.3	Solution for tangential crack in NdFeB RM	437
9.6	Physical properties of HD Nd-Fe-B magnets	440
9.6.1	Mechanical properties of HD Nd-Fe-B magnet	440
9.6.2	Electrical properties of HD Nd-Fe-B magnet	443
	References	445
Chapter 10 Progress in Recycling of Nd-Fe-B Sintered Magnet Wastes		
		451
10.1	Introduction	452
10.2	Recycling techniques for bulk Nd-Fe-B sintered magnet wastes	454
10.2.1	Introduction to the recycling techniques	454
10.2.2	Magnet-magnet techniques	455

- 10.2.3 Magnet-powder technologies 460
- 10.3 Overall properties of the recycled Nd-Fe-B sintered magnets 464
 - 10.3.1 Thermal stability of the recycled magnets 464
 - 10.3.2 Chemical stability of the recycled magnets 465
 - 10.3.3 Mechanical properties of the recycled magnets 468
- 10.4 Recycling of bulk Nd-Fe-B sintered wastes at mass
production level 468
- 10.5 Concluding remarks and perspectives 471
- References 472
