# Contents

Foreword . . . . . III

CHAPTER 1
Fundamental Concepts in Thermodynamics . . . . . 1

1.1 Thermodynamic Systems, Environment and Boundary Conditions . . . . . 1
1.1.1 Thermodynamic Systems . . . . . 1
1.1.2 Surroundings . . . . . 4
1.1.3 Boundaries . . . . . 4
1.2 State, State Properties and State Equations . . . . . 5
1.2.1 States . . . . . 5
1.2.2 State Properties . . . . . 6
1.2.3 State Equations . . . . . 10
1.2.4 Thermodynamic Processes . . . . . 12
1.2.5 Reversible Processes . . . . . 14
1.2.6 Flow and Non-Flow Processes . . . . . 16
1.2.7 Cycle Processes and Thermodynamic Cycles . . . . . 17
Problems and Exercises . . . . . 19
Problems . . . . . 19
Exercises . . . . . 20

CHAPTER 2
Energy and the First Law of Thermodynamics . . . . . 23

2.1 Work and Calculation of Work . . . . . 24
2.1.1 Mechanical Work . . . . . 25
2.1.2 Reversible Expansion Work . . . . . 26
2.1.3 Indicator Diagram . . . . . 29
2.2 Heat and the Heat Transfer Process . . . . . 32
2.3 Energy Storage in Systems and Its Properties . . . . . 34
2.4 The First Law of Thermodynamics . . . . . 38
2.5 Energy Analysis of Closed Systems . . . . . 40
2.6 Energy Analysis of Open Systems . . . . . 43
2.6.1 Mass Conservation in Control Volume Systems . . . . . 43

2.6.2 Energy Conservation in Control Volume Systems . . . . . 44
2.6.3 Energy Equation for Steady Flow Systems . . . . . 47
2.6.4 Technical Work and Its Representation on a $p$-$v$ Diagram . . . . . 48
2.7 Application of the Steady Flow Equation . . . . . 49
2.7.1 Nozzles and Diffusers . . . . . 50
2.7.2 Turbines . . . . . 50
2.7.3 Compressor . . . . . 52
2.7.4 Adiabatic Throttling . . . . . 53
2.7.5 Free Expansion Process . . . . . 54
2.7.6 Adiabatic Mixing Process . . . . . 54
2.8 Application of Unsteady-State Energy Equations . . . . . 58
2.8.1 Filling Process . . . . . 59
2.8.2 Gas Leakage Process . . . . . 60
Problems and Exercises . . . . . 62
Problems . . . . . 62
Exercises . . . . . 63

CHAPTER 3
The Second Law of Thermodynamics and Entropy . . . . . 67

3.1 Spontaneous Processes and the Directionality of Energy Transfer and Conversion . . . . . 68
3.1.1 Spontaneous Process . . . . . 68
3.1.2 Directionality of Energy Transfer and Conversion . . . . . 68
3.2 Expression of the Second Law of Thermodynamics . . . . . 71
3.3 The Carnot Cycle, Carnot Theorem and Kelvin Temperature Scale . . . . . 74
3.3.1 The Carnot Cycle Theorem . . . . . 74
3.3.2 The Kelvin Temperature Scale . . . . . 76
3.4 State Parameter—Entropy . . . . . 78
3.4.1 Entropy Introduced by the Method of Comparison . . . . . 79
3.4.2 Entropy Introduced by the Second Law . . . . . 83
3.4.3 Entropy Introduced by the Carnot Law . . . . . 84
3.5 First and Second $TdS$ Equations . . . . . 86
3.6 Entropy Change, Entropy Flow and Entropy Generation . . . . . 87
3.7 Entropy Balance Calculation of the System . . . . . 90
3.8 Principle of Entropy Increase . . . . . 91
Problems and Exercises . . . . . 94
Problems . . . . . 94
Exercises . . . . . 95

CHAPTER 4
The Ideal Gas Thermodynamic Process . . . . . 99

4.1 Ideal Gas Properties and Their Equations of State . . . . . 99
4.1.1 The Internal Energy and Enthalpy of an Ideal Gas . . . . . 100
4.1.2 Specific Heat Capacity of an Ideal Gas . . . . . 101

4.1.3 Relationship Between Constant Volume Specific Heat Capacity and Constant Pressure Specific Heat Capacity . . . . . 104
4.1.4 Calculation of Internal Energy, Enthalpy and Entropy of an Ideal Gas . . . . . 106
4.2 An Ideal Gas Mixture . . . . . 108
4.2.1 Dalton's Law . . . . . 109
4.2.2 Amagat's Law . . . . . 109
4.2.3 Composition of an Ideal Gas Mixture . . . . . 110
4.2.4 Equivalent Molar Mass and Equivalent Gas Constant of Mixed Gas . . . . . 111
4.2.5 Specific Heat Capacity of a Mixed Gas . . . . . 112
4.2.6 Thermodynamic Energy, Enthalpy and Entropy of a Mixed Gas . . . . . 112
4.3 Basic Thermodynamic Processes of an Ideal Gas . . . . . 113
4.3.1 Constant Volume Process . . . . . 114
4.3.2 The Constant Pressure Process . . . . . 116
4.3.3 The Constant Temperature Process . . . . . 119
4.3.4 The Constant Entropy Process . . . . . 121
4.3.5 Polytropic Process . . . . . 123
4.4 Actual Gas and Its Equation of State . . . . . 126
4.4.1 The Van Der Waals Equation . . . . . 127
4.4.2 The Redlich–Kwong Equation . . . . . 128
4.4.3 Virial Equations . . . . . 128
Problems and Exercises . . . . . 129
Problems . . . . . 129
Exercises . . . . . 130

CHAPTER 5
Water Vapour and Associated Thermal Processes . . . . . 133

5.1 Phase Transition Processes in Pure Substances . . . . . 133
5.2 The Process of Water Vapour Generation at Constant Pressure . . . . . 135
5.3 *T*-*V* and *p*-*v* Diagrams for Water Vapour . . . . . 138
5.4 Calculation of *Dryness* and State Parameters of Wet Vapour . . . . . 141
5.5 Table of Thermal Properties of Water Vapour . . . . . 143
5.6 Enthalpy-Entropy Diagram of Water Vapour . . . . . 147
5.7 Thermal Processes of Water Vapour . . . . . 149
5.7.1 Isobaric Process . . . . . 149
5.7.2 Isovolumetric Process . . . . . 150
5.7.3 Isothermal Process . . . . . 150
5.7.4 Adiabatic Process . . . . . 151
Problems and Exercises . . . . . 153
Problems . . . . . 153
Exercises . . . . . 153

CHAPTER 6
Concepts of Exergy and Exergy Analyses . . . . . 157

6.1 Availability and Quality of Energy . . . . . 157
6.2 The Development of the Exergy Concept . . . . . 159
6.3 Calculation of Exergy and Exergy Balanced Equations . . . . . 161
6.3.1 The Exergy of Work . . . . . 162
6.3.2 The Exergy of Heat . . . . . 162
6.3.3 The Exergy of Cold Energy . . . . . 165
6.3.4 The Exergy of the System . . . . . 167
6.3.5 Evaluation of the Degree of Available Energy Use . . . . . 173
Problems and Exercises . . . . . 175
Problems . . . . . 175
Exercises . . . . . 175

CHAPTER 7
Irreversible Processes and Finite-Time Thermodynamics . . . . . 179

7.1 Irreversibility of Energy Transfer Processes . . . . . 179
7.1.1 Irreversibility of Heat Transfer Processes and Entropy Generation . . . . . 180
7.2 Irreversible Processes and Work Losses . . . . . 183
7.2.1 Work Loss in Irreversible Heat Engines . . . . . 183
7.2.2 Work Loss of Irreversible Processes . . . . . 184
7.2.3 Finite Time Cycle Processes . . . . . 186
7.2.4 Internal Reversible Heat Engine Models . . . . . 187
Problems and Exercises . . . . . 195
Problems . . . . . 195
Exercises . . . . . 195

CHAPTER 8
General Thermodynamic Relationships and Thermophysical Coefficients . . . . 199

8.1 General Differential Equations for State Parameters . . . . . 200
8.2 Conditions for Full Differentiation of Binary Functions . . . . . 201
8.3 State Functions and Maxwell's Equations . . . . . 204
8.4 General Equations for Internal Energy, Enthalpy and Entropy . . . . . 206
8.5 Thermal Coefficients and Their Properties . . . . . 213
Problems and Exercises . . . . . 217
Problems . . . . . 217
Exercises . . . . . 217

CHAPTER 9
The Ideal Gas Power Cycle . . . . . 219

9.1 The Carnot Cycle and Its Performance Analysis . . . . . 220
9.2 The Brayton Cycle . . . . . 226
9.2.1 The Ideal Brayton Cycle and Its Efficiency . . . . . 226

9.2.2 The Impact of Irreversibility on Cycle Performance . . . . . 232
9.2.3 Regenerative Cycle . . . . . 235
9.2.4 A Brayton Cycle with Intermediate Cooling . . . . . 239
9.2.5 Reheat Cycle . . . . . 242
9.2.6 Reheat Cycle with Intermediate Cooling . . . . . 243
9.3 The Otto Cycle . . . . . 244
9.4 The Diesel Cycle . . . . . 249
9.5 The Sabathé Cycle . . . . . 253
9.6 The Stirling and Ericsson Cycles . . . . . 258
Problems and Exercises . . . . . 262
Problems . . . . . 262
Exercises . . . . . 263

CHAPTER 10
The Basic Process of a Steam Power Cycle . . . . . 267

10.1 The Basic Process of an Ideal Steam Power Cycle . . . . . 268
10.2 The Basic Steam Power Cycle . . . . . 270
10.3 The Overheated Rankine Cycle . . . . . 280
10.4 Factors Affecting the Efficiency of the Rankine Cycle . . . . . 283
10.5 The Reheated Rankine Cycle . . . . . 287
10.6 The Regenerative Cycle . . . . . 290
10.6.1 Selection of a Regenerative Mode . . . . . 291
10.6.2 Performance Analysis of Regenerators . . . . . 293
Problems and Exercises . . . . . 297
Problems . . . . . 297
Exercises . . . . . 298

CHAPTER 11
Moist Air and Air Conditioning Processes . . . . . 301

11.1 Composition and Characteristics of Moist Air . . . . . 301
11.2 Saturated and Unsaturated Moist Air . . . . . 303
11.3 Enthalpy and the Specific Heat Capacity of Moist Air . . . . . 306
11.4 The Absolute and Relative Humidity of Moist Air . . . . . 308
11.5 Dew Point Temperature, Dry and Wet Bulb Temperature . . . . . 311
11.6 Enthalpy and Humidity ($h$-$d$) Diagram of Moist Air . . . . . 314
11.7 Basic Process of Air Conditioning . . . . . 317
11.7.1 The Heating or Cooling Process . . . . . 318
11.7.2 The Heating and Humidification Process . . . . . 320
11.7.3 The Cooling and Dehumidification Process . . . . . 323
11.7.4 The Adiabatic Humidification Process . . . . . 325
11.8 A Mixing Process of Moist Air . . . . . 326
11.9 Cooling Towers . . . . . 329
Problems and Exercises . . . . . 333
Problems . . . . . 333
Exercises . . . . . 333

CHAPTER 12
Thermodynamic Processes of Gas Flow and Nozzles . . . . . 337

12.1 Basic Equations for Stable Flows . . . . . 337
12.1.1 Momentum Equation of Steady One-Dimensional Flow . . . . . 338
12.1.2 Continuity Equation of Steady One-Dimensional Flow . . . . . 339
12.1.3 Differential Form of Energy Equation of Steady State Adiabatic Flow . . . . . 340
12.2 Speed of Sound and Mach Number . . . . . 342
12.3 Influence of Channel Section on Sound Velocity . . . . . 344
12.4 Design Calculation of Nozzle and Diffuser . . . . . 346
12.4.1 Calculation of Flow Velocity and Rate . . . . . 347
12.4.2 Critical Temperature Ratio and Critical Pressure Ratio . . . . . 348
Problems and Exercises . . . . . 353
Problems . . . . . 353
Exercises . . . . . 354

CHAPTER 13
Thermodynamic Processes of Compressors . . . . . 357

13.1 Piston-Type Compressor . . . . . 357
13.1.1 Operating Principle of the Compressor . . . . . 357
13.1.2 Power Consumption of Compressors . . . . . 358
13.2 Effect of Clearance Volume on Piston Compressor Performance . . . . . 362
13.2.1 Theoretical Power Consumption . . . . . 362
13.2.2 Effect on Compressor Capacity . . . . . 366
13.3 Multi-Stage Compression and Intercooling . . . . . 367
13.4 Thermodynamic Process of Impeller Compressor . . . . . 371
Problems and Exercises . . . . . 373
Problems . . . . . 373
Exercises . . . . . 374

CHAPTER 14
Refrigeration and Heat Pump Cycles . . . . . 377

14.1 The Basic Process of Refrigeration . . . . . 377
14.2 The Reverse Carnot Cycle . . . . . 380
14.3 Vapour-Compression Refrigeration Cycle . . . . . 382
14.4 Actual Vapour-Compression Refrigeration Cycle . . . . . 387
14.5 Selection of Refrigerants . . . . . 390
14.6 Compressed Air Refrigeration Cycle . . . . . 392
14.6.1 Stirling Refrigeration Cycle . . . . . 392
14.6.2 Brayton Refrigeration Cycle . . . . . 395
14.7 Other Refrigeration Cycles . . . . . 399
14.7.1 Absorption and Adsorption Refrigeration Cycles . . . . . 399
14.7.2 Thermoelectric Refrigeration Cycle . . . . . 401

14.7.3 Airflow Ejector Refrigeration Cycle . . . . . 402
14.8 Heat Pump Cycle . . . . . 404
Problems and Exercises . . . . . 407
Problems . . . . . 407
Exercises . . . . . 408

CHAPTER 15
Chemical Reactions . . . . . 413

15.1 Basic Concepts . . . . . 413
15.1.1 Chemical Reaction Equation . . . . . 413
15.1.2 Reactivity . . . . . 414
15.2 Application of the First Law of Thermodynamics in Chemical Reactions . . . . . 417
15.2.1 Expression of the First Law of Thermodynamics in Chemical Reactions . . . . . 417
15.2.2 Reaction Enthalpy, Fuel Combustion, and Standard Enthalpy of Formation . . . . . 417
15.2.3 Calculating the Thermal Effect of Chemical Reactions Using Hess's Law . . . . . 418
15.3 Application of the Second Law of Thermodynamics in Chemical Reactions . . . . . 421
15.3.1 Criteria for Chemical Reaction Direction and Chemical Equilibrium . . . . . 421
15.3.2 Chemical Equilibrium Constants and Equilibrium Shift Principles . . . . . 423
Problems and Exercises . . . . . 426
Problems . . . . . 426
Exercises . . . . . 426

Bibliographic References . . . . . 427
